Lawn Aeration

BENEFITS:

- Controls thatch
- Promotes thicker turf growth
- Strengthens turf against weeds
- Prevents excess compaction
- Improves the soil structure
- Helps create growth pockets for new roots
- Establishes deeper and healthier root system
- Allows more effective fertilization applications
- Opens the way for water, oxygen and fertilizer to reach the root zone

POWERCORE AERATION

Power core aeration is one of the most important cultural practices available for your lawn. Overtime, aeration will greatly improve the look and feel of your property's lawn. Annual or semi-annual aeration is advised for all lawns on heavy clay soils, those with a thatch buildup, and any lawn that needs to be "thickened up." Our highly trained horticulturalists can help you determine an optimal and cost effective aeration plan for your property.
